

Data Sheet Product Code: **CB60-CS-S1**

Product Description: **Choice 60 Height Adjustable Base Unit With Combination Support Synchro**

General Images of the Product Range Features

Choice 60 Height Adjustable Base Unit With Combination Support Synchro

Product Code

CB60-CS-SI

The "Choice" range of products and accessories allows the user to support a tablet computer, laptop, monitor and touch screen monitor, (the device) at the correct ergonomic height for sitting or standing. By allowing the device to be supported at different angles "Choice" also facilitates direct data input and or viewing preferences.

This cost effective solution offers simple adjustment that automatically locks in place at the desired height, or viewing angle, if the device has a protective cover this can remain in place. Designed to be positioned on any bench or desktop to allow sitting or standing height.

Base & Support Arms

The Choice Base is over moulded in Polyurethane, which featured ribs enabling different viewing angles, whilst maintaining a soft user friendly interface, that also prevents any damage to the users device.

The Choice Long Arm element of the Combination Support features a 2 part injection moulding process, enabling a soft TPE interface surface to provide enhanced grip and security. The longer support arm enables the device screen to be angled towards the user for direct data entry and can also accommodate a separate keyboard in the horizontal position.

The Choice Short Support features 3 recess and 1 end stop enabling different viewing angles without the visual interference of the Long Support Arm.
