Accessory Description: **Choice Wall Combination Support Extended Synchro**
200mm L x 225mm W

General Images of the Product Range Features

Choice Wall Combination Support Extended Synchro 200mm L x 225mm W

Product Code

CWCSE-SI

The "Choice" range of products and accessories allows the user to support a tablet computer, laptop, monitor and touch screen monitor, (the device) at the correct ergonomic height for sitting or standing. By allowing the device to be supported at different angles "Choice" also facilitates direct data input and or viewing preferences.

This cost effective solution offers simple adjustment that automatically locks in place at the desired height, or viewing angle, if the device has a protective cover this can remain in place.

Base & Support Arms

The Choice Long Arm element of the Combination Support features a 2 part injection moulding process, enabling a soft TPE interface surface to provide enhanced grip and security. The longer support arm enables the device screen to be angled towards the user for direct data entry and can also accommodate a separate keyboard in the horizontal position.

The Choice Short Support features 3 recess and 1 end stop enabling different viewing angles without the visual interference of the Long Support Arm.

The working platform can be increased or reduced with the push fit support extensions. The use of the extenders is particularly useful when using a Mouse or Tracker Ball.
